Example.test Accessibility Audit

example.test | WCAG 2.1 AA | 10 of 10 pages with completed results

Report date: November 9, 2026

Evidence date: 2026-11-01

This skill generates automated WCAG 2.1 AA accessibility reports. Automated tools detect 30%–90% of issues on the pages that were scanned. Results are informational only, not legal advice or a compliance certification. Manual testing by a qualified professional is required for complete coverage.

Executive summary

We checked 10 of 10 selected pages in their recorded rendered states. Together, these pages account for 86,500 known pageviews.

WCAG 2.1 Level AA is the standard most commonly applied in accessibility law and procurement, so every result below is measured against it.

We found 17 violation instances. Many repeat across pages or elements; once grouped by verified component evidence, they represent 3 unique fixes.

Unique fixes by severity

0	3	0	0
Critical	Serious	Moderate	Minor

Pages scanned

Page	Pageviews[1]	Violation instances
Women's Bracelets	10,000	2
Homepage	9,700	1
Search	9,400	0
Women's Rings	9,100	3
Men's Bracelets	8,800	2
Women's Necklaces	8,500	2
Women's Landing	8,200	1
Women's Earrings	7,900	2
Men's Necklaces And Chains	7,600	2
Men's Rings	7,300	2

[1] Traffic window: November 1–November 2, 2026 (synthetic). Pageviews describe exposure, not affected people.

Needs manual review: 10 incomplete rule records. These are not confirmed violations. Detailed counts, scan options and exact timestamps remain in the evidence JSON and optional appendix.

Key findings

Ordered by priority: severity weighted by known page traffic and verified shared-component breadth.

#	Finding	WCAG criterion	Severity
1	Product image icons have no text alternative	1.1.1 Non-text Content	SERIOUS
2	Gift-guide overlay link has no accessible name	2.4.4 Link Purpose (In Context); 4.1.2 Name, Role, Value	SERIOUS
3	Introductory text link relies on color alone	1.4.1 Use of Color	SERIOUS

1. Product image icons have no text alternative

Severity: SERIOUS | **Pages affected:** 7 | **Known pageviews:** 59,200 | **Instances:** 14

1.1.1 Non-text Content

Evidence: Scanner finding; manual reproduction pending

The scanner flagged product-card SVG images exposed without a text alternative.

Potential user impact: People using assistive technology may not receive the image's meaning. A named surrounding control can already convey the same purpose.

Selector

```
.product:nth-child(1) svg
```

Example HTML

```
<svg role="img"></svg>
```

What needs to change: Each image needs an appropriate text alternative, or decorative treatment when its purpose is already conveyed.

Verification: Reproduce the finding in the recorded state, verify the user experience manually, then rerun the relevant check.

Scanned pages affected: Women's Bracelets, Women's Rings, Men's Bracelets, Women's Necklaces, Women's Earrings, Men's Necklaces And Chains, Men's Rings

2. Gift-guide overlay link has no accessible name

Severity: SERIOUS | **Pages affected:** 2 | **Known pageviews:** 17,900 | **Instances:** 2

2.4.4 Link Purpose (In Context); 4.1.2 Name, Role, Value

Evidence: Scanner finding; manual reproduction pending

The focusable overlay links to the gift guide but has no text describing that destination.

Potential user impact: People navigating by links may not be able to identify the destination.

Selector

```
.hero-link
```

Example HTML

```
<a href="/gifts"></a>
```

What needs to change: The link needs a meaningful accessible name describing the gift guide.

Verification: Reproduce the finding in the recorded state, verify the user experience manually, then rerun the relevant check.

Scanned pages affected: Homepage, Women's Landing

3. Introductory text link relies on color alone

Severity: SERIOUS | **Pages affected:** 1 | **Known pageviews:** 9,100 | **Instances:** 1

1.4.1 Use of Color

Evidence: Scanner finding; manual reproduction pending

The scanner flagged the introductory Shop rings link because its styling does not distinguish it beyond color.

Potential user impact: People who cannot reliably distinguish colors may have difficulty recognizing the link.

Selector

```
.intro a
```

Example HTML

```
<a href="/rings">Shop rings</a>
```

What needs to change: The link needs a persistent visual cue, such as an underline.

Verification: Reproduce the finding in the recorded state, verify the user experience manually, then rerun the relevant check.

Scanned pages affected: Women's Rings

Coverage and limitations

Only recorded rendered states are covered. Hidden states, unselected pages, cross-origin frames, shadow roots, keyboard behavior and assistive-technology use require explicit verification. Unreviewed pages are not clean.

Fictional data for layout testing. No live storefront was scanned.

The evidence JSON contains full scanner metadata, individual targets, states and raw checks. This PDF has not been verified as tagged or PDF/UA conformant.
